

# EXHIBIT D

KS DB60 R 32

clones 1, 2, 3, 4

Eco RI R<sub>x</sub> cut of insert

1	1	2	2	44	3	3	4	4
cut	cut	cut	cut	100	cut	cut	cut	cut
2nd	5th	2nd	5th		2nd	5th	2nd	5th

I picked this clone to grow up + sub-clone into M13

Southern:

Probed w/  
λgt11 DB60  
fragment

62

Nitrocellulose  
Blot

DB60 R32 - clone selected from Huvor-DNA

$\lambda$ gt11 library of screening w/ DB60  
EcoRI fragment picked in 1<sup>st</sup> screen  
w/ 2 P126F antibody

insert cut from  $\lambda$ gt11, ~~for~~ subcloned  
into KS+ bluescript phagemid

grown up in 50 ml of NM522 cells,  
phagemid prep of 50 ml, ran 10  $\mu$ g  
on low salt gel + cut out EcoRI  
fragment. Ran over Clutip column  
(very hard to push low salt went through,  
too much agarose, need smaller slice)

Fragment run on gel w/ marker

Fragment size is
